

DEPARTMENT OF BIOCHEMISTRY

Subject: About 2020-2021 Fall Term

Date: October 04, 2020

Dear Students,

Due to the COVID-19 pandemic, our university made changes in the previously announced academic calendar (<https://neu.edu.tr/academic-calendar/?lang=en>) and announced that education will begin on October 05, 2020.

Our university will use the newly structured student and academic information software system in the fall 2020 semester. Therefore, until the new system is activated, all courses will be opened and carried out on UZEBİM. Explanations on the subject were made on our faculty's website <http://veterinary.neu.edu.tr/information-about-course-registrations/?lang=en>.

Besides, we will make our courses within the scope of the educational model announced by our university in the fall semester of the 2020-2021 Academic year. Click to read the text of "[Information About the 2020-2021 Fall Semester Educational Model](#)".

The courses taught by the Department of Biochemistry in the 2020-2021 Fall semester will be carried out on the days and hours specified in the attached course and work schedule, including their codes and classrooms, in line with the following points.

- **VTT103 Organik Kimya** course will be **conducted only on** <http://flippedlearning.neu.edu.tr/> according to the Flipped Learning Classroom model. Therefore, our students must register for the course by opening an account in the system.
- **VTE103 Organic Chemistry** course will **only be conducted on** [UZEBİM](#) according to the distance learning model.
- **VTT203, VTE203, LVS105 and LVS211 courses;**
 - According to the educational model, lectures will be carried out in a face-to-face education model with students who will come to the campus. All the hygiene and social distance rules are going to be followed in the classroom.
 - Except for the face-to-face lecture hours, all other elements of the courses will be conducted over UZEBİM.
 - If possible, our lectures in the face-to-face classroom will be broadcast live on Google Meet. Thus, students who will follow the lecture on UZEBİM will be able to watch the lecture live during the lecture time.
 - The courses taught in the classroom will be recorded within the bounds of possibility, and the records will be uploaded to the UZEBİM course page for students who will follow the course on UZEBİM.
- **"Introduction to Course"** videos for each course has been prepared and uploaded to the course pages.
- VTT113 and NEUVET519 courses are common clinical courses involved in the central course schedule. These courses that will be held in the Animal Hospital Diagnostic Laboratory are not shown in the course schedule for now. You will be informed later.
- All **assessment procedures** of the courses will be carried out **digitally only on UZEBİM, Flip Learning NEU or other digital platforms we will determine.** We will follow the principles specified in the course catalogues. Face to face evaluation is not going to be made.

We wish all our students good health and success in the new term.

Serkan SAYINER, DVM. PhD. Assist. Prof.

Head of the Department of Biochemistry and Animal Hospital Diagnostic Laboratory Chief

E-mail: serkan.sayiner@neu.edu.tr

Research Assistants: Deniz CEYLANLI, DVM, PhD Candidate (deniz.ceylanli@neu.edu.tr)
Sevgi GENÇOSMAN, DVM, PhD Candidate (sevgi.gencosman@neu.edu.tr)
